Performance schedule: The performance lasts 25 minutes.

Set-up time before each performance: 10 minutes. Build-down time: 5 minutes.

We prefer to give two performances per day. (Three are also possible.)

The dancers require a minimum of 45 minutes of rest time between each performance.

Performance locations: Many possibilities: stage, theater foyer, sidewalk, courtyard, city plaza, basketball court, playground, indoor gym, outdoor amphitheater, etc.

Stage: Ideal performance area: 11m x 11m. Minimum performance area: 7.5m x 7.5m.

We can perform directly on asphalt or concrete. Smooth cobblestones are also acceptable.

We can also perform on a raised stage. No special dance floor required.

Audience: Ideally the audience sits/stands on all four sides of the performance area.

Audience capacity without risers: around 300. Audience capacity with risers: around 600.

Sound: Sound comes from the company's iPad (mini-jack port).

The Presenter is responsible for providing a sound system (ideally including a small mixer).

Two 250W portable speakers are typically sufficient.

Light: If performed outdoors during the day, no lighting equipment is required. If performed indoors, or outdoors at night, the performance area requires basic illumination.

Weather: We recommend that the presenter have an performance alternate space ready in case of rain. Theoretically we are able to perform in the rain. However, because our props (adhesive tape) are sensitive to water, the quality of the performance would be reduced.

Dressing rooms: We request space for two dancers, equipped with mirrors, showers with hot water, and materials for ironing.

Laundry services: If show is presented on multiple days, the Presenter must provide laundry service to wash and dry the costumes between each performance day.
